Peer testing 2 Woo Woo Network

1. Complete the following tasks

Introduction :

The Woo Woo Network is a platform focused on helping people via spiritual healing.

Since spiritual healing "Energy Medicine" is a scarce service, the platform proposed by our project sponsor, Kimberlee Klein, aims to provide a place where healers can provide their services to clients who need them. The website will connect clients with a variety of options for spiritual healers who will aid them with their healing process.

A **user** is a potential customer of the site. In the context of the project it would be someone that is looking for a spiritual healer.

Users can navigate the website, sign up, create an account, book appointments, look for healers nearby and more.

User :

- User sign up
- User log in
- User uses tags to search for a healer (search takes a while to load, click the search field first and wait till options show up, then use *tags* to manipulate search)
- User browses and selects a healer (use navigation bar and select healers to browse)
- User selects a healer to view its information ____
- User tries to book an appointment at different times
- User tries different services
- Access about us page
- User uses access near me
- User navigates map to find closest healer

Tags : buttons for different potential emotions the client might want to filter healers on

A **healer** is someone that is listing their service and is looking for clients through the website.

Healer :
- Sign up as healer

Click on healer should open more info not only learn more

Questions

2.) What do you think about the "near me" page ?

Do you have any suggestions on the "overall functionality of the system"?

3.) Was anything confusing?

4.) what would you improve

- tag search

  more intuitive

- healer page

1.) - overall positive feedback
    nearme with prices

2.) Ui improvements / highlight box
    while selecting
    overall intuitive

3.) N/A.

5.) - recommendation system

Session 2

- select / show more
  breaks website

- selecting in drop
  down not paired
  with tags

- clickable user tag

- service selection
  confusing

- no healer feedback

- Account should display user info

- manage account for client

- edit info

- customer/healer confusion

- lack of info due to implementation
